Test	Flag	Result	Reference Range - Units	Lab Lic. #
------	------	--------	-------------------------	------------

Hematology

Erythrocyte Sedimentation Rate		20	2 - 30	mm/hr	#5407
--------------------------------	--	----	--------	-------	-------

Serum Proteins

C Reactive Protein		4.8	<5.0	mg/L	
--------------------	--	-----	------	------	--

Test method: Roche Cobas CRP, suitable for cardiovascular disease assessment and detection of active inflammation.

CRP >=2.0 mg/L is a risk-enhancing factor for cardiovascular disease, as defined in the Guidelines of the American Heart Association and the American College of Cardiology (JACC 2019; 74: e177).

Immunology

HLA-B27

HLA-B27		NEGATIVE			#5687
---------	--	----------	--	--	-------

Immunophenotypic testing for the presence of HLA-B27 is performed by flow cytometry using the Beckman Coulter Duraclone B27 reagent kit (clones FD705 and ABCm3) which is approved for in vitro diagnostic (IVD) use. This methodology is intended for HLA-B27 screening for patients with autoimmune disorders and has a clinically acceptable sensitivity of 84.9% and specificity of 98% which may result in false positive and false negative results in a limited number of cases. Therefore, the results of this test must be interpreted in the context of clinical and other laboratory findings.
