**Creatinine Clearance**

Specimen Volume	2.90		L/Day
Body Surface Area	1.82		m x m
Creatinine	88	50-100	umol/L
Glomerular Filtration Rate (eGFR)	70		

An eGFR from 60-89 ml/min/1.73 m2 is consistent with mildly decreased kidney function. However, in the absence of other evidence of kidney disease, eGFR values in this range do not fulfill the KDIGO criteria for chronic kidney disease. Interpret results in concert with ACR measurement.

For patients of African descent, the reported eGFR must be multiplied by 1.15.

Effective May 4 2015, eGFR is calculated using the CKD-EPI 2009 equation.

KDIGO 2012 guidelines highlight the importance of eGFR and urine albumin creatinine ratio (ACR) in screening, diagnosis and management of CKD. Results for eGFR should be interpreted in concert with ACR.

Creatinine (Urine)	3.6	2.5-20.0	mmol/L
Creatinine Renal Clearance/1.73 Sq M	1.30	1.18-2.18	mL/S

Reference range applies only to clearance corrected for body surface area.

Creatinine (24h Urine)	10.4	5.5-17.5	mmol/D

**Protein 24h Urine**

Protein	<0.10	<0.15	g/L
Protein (24h Urine)	Unable to calculate 24-hr excretion as the concentration is less than the lower limit of the analytical range of the method.
